Review of: "Augmented Reality (AR) Technology on Student Engagement: An Experimental Research Study"

Dina Smith-Glaviana[1]

1 Virginia Polytechnic Institute and State University

This interesting study reflects prior research findings wherein using technology to enhance learning is beneficial yet can lead to confusion and frustration due to technological issues. The methodology and conclusions are sound. The paper may be improved by changing the future tense to the past tense used at the beginning of the article. It felt more like reading a research proposal than a completed study.
