**Potential competing interests:** No potential competing interests to declare.

At first, I would like to congratulate the author for this great business,

Some comments and suggestions about this manuscript are as follows:

1. In the abstract part of the study, used software, E-views, may be removed from the text for a more professional appearance.
2. Please avoid the use of abbreviations in the abstract part of the study, e.g., CBN, it is not clear, I suppose it refers to the Central Bank of Nigeria, but just guess.
3. Line 6: layoff off (repeating use mistakenly).
4. Please include the study's structure, i.e., organization, at the end of the introduction.
5. No need to use any sources for your results' demonstrations, e.g., Figure 1.
6. In Table 1, include some notations like \*, indicating whether statistics are significant or not, and besides, utilize at most three decimals for results' presentations.
7. In Table 3, put the statement "Null Hypothesis: No Long-run Relationship" below Table.
8. In such a study, descriptive statistics are needed to have a better understanding of the nexus between variables.
9. As far as is understood, all the variables are in the log-form, please carefully check the interpretation of coefficients.
10. All variables should be defined in a clearer way.
11. Please check the results CUSUM of square statistics, as far as is seen, in some periods, the cumulative sum exceeds the area between the two critical bounds.
12. Where are \*s in Table 6.
13. My words in the 11th comment are valid for Figure 6 too.
14. Conclusion part of the study could have been written more strikingly.
