Dear author,

Congratulations on representing the quantitative approach with a sound methodological design. The sampling frame methods used in the study were appreciated. The limitations and recommendations highlighted areas that are helpful for future researchers to incorporate focused competency in the relevant field. The following queries are to be clarified from a viewer's point of view, and suggestions can be incorporated

- Remove the keywords like Ebonyi State, Nigeria.

Instead, this can be changed to Nutrition, Education, competencies, Health professionals, and Dietary Habits

- Non-standardized questionnaires are validated or not? What about the reliability?
- The chi-square value used between two categorical variables is not mentioned?
- If possible, mention 80% of the references within the latest 5 years.
