Comments to authors

- Rewriting parts of the manuscript to include more relevant subheadings would help readers better understand the material and keep track of the overall structure. For example, you can include the following subheadings under the heading: Energy generation and water usage: 1- Water consumption in energy generation, and 2- Climate change impact.
- There should be more citations to cover more relevant and important prior research because the topics covered are broad and complex in each part.
- It is uncommon to see acronyms used without first defining them. Any use of acronyms must be followed by a definition.
