

Review of: "The antithetical relationship of Entrepreneurship and Corruption on Radicalization among the Moroccan Youths: An Empirical study"

Joyce Minja

Potential competing interests: No potential competing interests to declare.

This is an informative and interesting paper. The authors may check the following areas for improvement:

1. This paragraph (paragraph 2) seems to be hanging "**However, most of the above contributors failed to cover the literature on linkages and co-movement between businesses, corruption, terrorism and radicalization.**" I think there is still room to establish the debates that lead to this statement because the authors have already stated that research in the area is scarce.
2. "**....are the institutional structure and its activities are inherently flawed (Naude, 2011).**" Maybe they could check for a more recent source as this is a key statement. Also, other sources may be updated. The paper should also be checked for spelling and grammatical errors.
3. This section is incomplete:

"The rest of this paper is organised as follows. In the subsequent section literature review is presented to argue the importance of linkages and co-movement between entrepreneurship and its efficacies towards economic and social progress in 21st-century society when the world is linked via high-power computing facilities. It presents the case of Morocco where the process of entrepreneurship and economic development suffered due to radicalism."

It only talks about the subsequent section which is the literature review. There are several ways to link to other sections: the most common is to state the organization of all the following sections at the end of the introduction. OR the preceding section can introduce the next section.

"pro-market institutions are integral for developing the economy and increasing..... incomplete

There also needs to be justification for the inferential analysis method selected as per the collected data. Why ANOVA?
Binary Logistic regression?

Also maintain consistency in table contents like number of decimal places. E.g. Table 7 the presentation of the p value for trust in the government

In the conclusion and implications, the study could elaborate more on its contribution to institutional theory development since it drew a lot from this theory in the introduction and literature.
