Potential competing interests: No potential competing interests to declare.

The research topic was interesting and important.

Some things will be mentioned below that reduced the power of the study and made the structure of the study irregular.

1- The abstract is very long and full of repetitive sentences, and instead of these sentences, you can maneuver more on the work method and results.

2- The introduction is very, very long and does not have the necessary continuity, which makes the reader tired and confused.

3- At the end of the introduction, the purpose of the study is expected to be mentioned, not the results of previous studies.

4- The work method is very brief, and the type of study, time, entry and exit criteria are not mentioned in it.

5- The questionnaires used are not well explained, and the validity and reliability have not been fully explained.

6- Goals and results do not match.

7- The explanation below the tables is insufficient and is ambiguous in many places.

8- The discussion section was not seen!!!!!!

9- Strengths and weaknesses of the study

10- Code of ethics obtained from the desired university!!!
