The Influence of Hot Extrusion on The Mechanical and Wear Properties of an Al6063 Metal Matrix Composite Reinforced With Silicon Carbide Particulates

Comments

Abstract: Include important outcomes of your research in a quantitative manner.

Introduction: More literature related to your work should be added. Clearly explain the research gap, methodology, and objectives of the study at the end of the introduction section.

Experimental work: Add subheadings for materials used, composite fabrication, testing, etc.

Material purchasing details like supplier, material's chemical composition, and material properties should be included.

Specimen diagrams with dimensions for each test should be added.

Conclusion: Authors need to add a few sentences about your research at the beginning of the conclusion.
