# Vascular Endothelial Growth Factor Antisense Oligonucleotide

National Cancer Institute

## Source

National Cancer Institute. *Vascular Endothelial Growth Factor Antisense Oligonucleotide*.  
NCI Thesaurus. Code C53435.

An antisense oligonucleotide with potential antiangiogenesis activity. Vascular endothelial growth factor (VEGF) antisense oligonucleotide binds directly to binds VEGF A/C/D mRNA, leading to mRNA degradation and the inhibition of VEGF A-mediated angiogenesis and VEGF C/D-mediated lymphangiogenesis.
