In the case report, the symptoms of 3 different Long-COVID patients, which resolved after PAMP treatment, were mentioned. I think that researchers who reach a very interesting result can direct larger clinical studies. I believe it needs minor revision before publication.

1. Patient 1: Patient information is given in detail. It was stated that the patient's symptoms increased after SARS-CoV-2 infection. It is recommended to report whether a similar situation occurs after vaccination.
2. Patient 2: There is no detailed medical information or clinical history about the patient. Vaccination and COVID-19 history, comorbidities, etc., are not provided. It is recommended to add .
3. Patient 3: The patient has a history of vaccination. It is recommended to provide information about the COVID-19 history.
4. In general, it is recommended to detail the treatment processes of the second and third patients.
