

Review of: "Assessment of Quality of drinking waterbased on the water quality index method in Hawassa Zuria Woreda, Sidama Regional State, Ethiopia"

Hajar Merrikhpour

Potential competing interests: there is no declaration

The manuscript is well written, but the novelty of the research is not clear, and considering that many manuscripts have been written in this field of study, it is better to use more recent references. And the important thing about reviewing this manuscript was that I didn't have access to the figures and tables and I couldn't check the data. Anyway the manuscript is acceptable after minor revisions.
