

# Review of: "Evaluation of the Tobacco Heating System (THS) During Closed Lower Limb Fracture Healing in Trauma Smokers' Patients"

Carlo Perisano<sup>1</sup>

<sup>1</sup> Policlinico Universitario Agostino Gemelli, Rome, Italy

Potential competing interests: No potential competing interests to declare.

Thank you to the authors for addressing such an interesting and timely topic.

The abstract is missing a "Results" section. Authors should include this part to provide an overview of the study and facilitate a better understanding.

Introduction: overall well-written, even if it is overly long and sometimes unclear and confusing. The authors are encouraged to improve this section by focusing more directly on the core topic.

Methods and Analysis: correct and well-detailed. However, the description of Table 2 could be improved, as it currently appears unclear.

The study lacks a Conclusion section and, more importantly, a Results section. The authors should include these sections, presenting the findings obtained from the analysis to provide a complete and comprehensive understanding of the study.
