Potential competing interests: No potential competing interests to declare.

The article titled *The Rural-Urban Divide: Insights from Immuno-Genetic Profiles and Implications for Health* presented the work on health and disease disparities in rural and urban populations due to different lifestyles.

1. The manuscript is well written and clearly states the objectives of the work.
2. Authors should specify the novelty of the work.
3. Status of non-communicable diseases may be included in the rural and urban populations, which is important for further understanding of the concerns of microbial infections or anthropogenic pollutants.
4. Authors should clearly state the total samples included for this study (rural/urban, helminths, serum, IgE levels, etc.).
5. Work is interesting, and further insights can be gained with large data sets from different geographical locations.
