Thank you very much for sending me this article to review.

I find it well written, interesting and certainly merits publication

I also agree with the conclusion that thyroid function should be monitored in patients with breast cancer in view of the effect of thyroid hormones on cancer progression and effectiveness of chemotherapy.

The findings of post menopausal women treated with neoadjuvant chemotherapy showing lesser extent of increase in T4 is not surprising since old age is a risk factor for hypothyroidism.

I believe the article provides useful information in the treatment of breast cancer.
