Dilated cardiomyopathy with ataxia

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Dilated cardiomyopathy with ataxia. ORPHA:66634*

Dilated cardiomyopathy with ataxia (DCMA) is characterized by severe early onset (before the age of three years) dilated cardiomyopathy (DCM) with conduction defects (long QT syndrome), non-progressive cerebellar ataxia, testicular dysgenesis, and 3-methylglutaconic aciduria.
