"The Synthesis of Quinolone Derivatives," named manuscript I reviewed as a referee.

Necessary figures and tables were used to enrich the manuscript and provide a better understanding of the work. I came to the conclusion that this article is original and important. Unfortunately, the manuscript cannot be accepted in its current form. However, it would be appropriate to make some corrections in order to improve the quality of the manuscript and make it more useful to readers.

Authors may consider the following points:

1. The author must improve the abstract section.
2. It would be appropriate to increase the number of references by making more up-to-date additions to the references.
3. It would be appropriate to have the article read by an academician who knows English better and correct grammatical errors to make it more fluent.

I have concluded that this article will be publishable after the above-mentioned mini-corrections have been made. I believe that if the manuscript is published, it will contribute to and benefit the scientific literature, scientists, and the journal.

As a result, it would be better if the article were subjected to a mini revision and published in the journal.
