Potential competing interests: No potential competing interests to declare.

The authors have included information on both species that complements the paper; however, it still lacks statistical information that improves their results.

There are still some flaws in the writing of the text; since repeated words appear, also in the description of the species, they mention that they are shrubs, and in the method, the authors mention that the material was collected from trees.

An improvement in the work is observed, but the objective and the research question are not clear, in addition to the lack of statistical information.
