

Review of: "Relationship between In Vitro Physical Properties and In Situ Biofilm Formation of Fissure Sealants"

C. S. Lopes

Potential competing interests: No potential competing interests to declare.

The research is interesting and has potential; however, I suggest some adjustments.

In the summary, I suggest that the conclusion presents the other tests in addition to biofilm formation.

In the methodology, I believe that information such as sample calculation or even a base study is relevant. Making it clearer and mentioning the procedure for preparing the hydroxyapatite paste, as well as the composition of the materials used, is pertinent since the composition interferes with the properties of dental materials.
