Potential competing interests: No potential competing interests to declare.

"The article is quite interesting and discusses the new thermodynamics of the 'entropy-centric conception of entropy.' It is a well-written manuscript, but how will this approach be practically implemented, and how much attention will this free energy receive? The practical implications of the entropy-centric approach and its role in thermodynamics should be included for better readability. What is the potential impact and reception of the free energy concept within the scientific community or industry?"
