Dear,

Thank you for allowing me to review this article; I have some comments that the author could consider. Some readers may find the term "elderly" disrespectful. Moreover, the cut-off age for the elderly has been revised. To avoid ambiguity, it is recommended that you define the elderly concisely (e.g., >55 or 60) and use this definition consistently throughout the article, considering the definition used in the cited reference. Additionally, the term "Dangers of Psychotropic Drugs" may not be scientific. Instead, it is suggested that you use "side effects" or "adverse effects" to describe the risks associated with these drugs.
