Review of: "Scalable Antigen-Antibody Binding Affinity Landscape: A Case Study with ENHERTU"

Umesh Kathad¹

1. Independent researcher

Overall, not enough data and details are provided in the Materials and Methods section. What input data was used for methods like Modeller and Prodigy is not clear from the information provided. Probably, a better workflow diagram showing data flow (input and output) might help readers to understand better and apply the knowledge or replicate the study. It appears that the method mentioned in the paper is derived from a non-peer-reviewed concept paper (ref. # 29); hence, it should be interpreted with caution and ideally supported by additional validation or comparative analysis to ensure its reliability and scientific rigor.
