Since it is a review paper, it should be more informative and technical. We all related to this field are well aware of the significance of P-wave characteristics as a diagnostic marker. Therefore, the information should be more compact and to the point in order to justify the morphology of the P wave in disease detection. There are some points mentioned below to improve the quality of your paper.

1. In Fig. 1, the presentation of P-wave properties is not up to the mark. You may present some real-time data to elaborate on P-wave properties.
2. After Fig. 1, although you have mentioned the morphology of the P wave, it would be more relevant to point out those from a separate prominent figure.
3. Based on the significance of P-wave indices in order to detect arrhythmias, a summary is provided in Table 1. Pointing out the fact that it is a review paper, I would suggest giving more references in the table.
4. Though you have mentioned the aspect of some electronic devices, I suggest you to be more elaborative. In that case, try to mention the importance of those devices precisely by using a general workflow diagram.
