This mini review by Dhuha Abdullah is a straightforward article attempting to summarize the known facts about Human Papillomavirus (HPV). Although the review is written in simple way for the easy understanding of the readers, the article needs to be updated with many of the recent trends and data to make it interesting. Some of the references (for example under the sub heading “etiology” are not the accurate. There is plenty of literature available on risk factors, diagnosis, pathophysiology, life cycle of HPVs and how HPV evades immune response. Including those would strengthen the article. Also, the prevalence and incidence reported needs to be updated with the latest data. Overall, it is a decent attempt to summarize the knowns of HPV and there is room for improvement.
