The article with the title "Future Trends in Ground Improvement: A Review" provides a comprehensive overview of all the latest advancements in related domains, including AI, robotics, sustainability, IoT, etc. The language is good and provides latest references. The absence of case studies, illustrations, examples, etc., is the paper's main flaw. The reader is left wondering just what is being suggested to be put into practice. The carbon impact of different activities, for instance, might be provided. Figures that show how the various approaches are applied would be very helpful to the field. I support accepting the article as long as the mentioned modifications are made.
