This work was clearly designed and executed. the results are encouraging, demonstrating the feasibility of an injectable formulation (β -CD carriers loaded with (+)SW033291) in the treatment of chronic fibrosis. Drug targeting to the lungs was possibly achieved. I am strongly in accordance with the publication of this paper. However, some brief discussions concerning issues like cytotoxicity of β -CD carriers loaded with (+)SW033291 and its biodegradability must be encouraged.
