

Review of: "Microbiological analysis of commonly consumed vegetable: A review on the ongoing studies"

Itandehui Arriaga

Potential competing interests: No potential competing interests to declare.

First of all, the article's title doesn't correspond with the development of the central topic; the authors need specify if they refer to bacteria that contaminate plants and also humans, or if these bacteria cause deterioration and decomposition only on plants (phytopathogens).

Secondly, it is important to mention the main extrinsic and intrinsic factors of bacterial contamination in food.

On the other hand, the authors could enrich and make the article more attractive if they included some graphs referring to the main vegetables consumed, the contaminating bacteria and their percentages.
