Potential competing interests: No potential competing interests to declare.

The idea of the work is very interesting, but the authors must attach the images of the NMR spectra, both of hydrogen and carbon, as well as the melting point range, to ensure the purity of the compounds.

They should also obtain UV/vis spectra and elemental analysis.

Data for compound 3 are missing.

In the summary the formula for AgNO₃ is written incorrectly. Please, comment on what the difference is in the use of different basic salts.

Activity-structure relationship could have been discussed in depth.
