**Potential competing interests:** No potential competing interests to declare.

The topic raised by the author is very interesting. Unfortunately, the article looks more like the author's loose thoughts or a popular science article.

This article needs the essential elements that can prove its scientific dimension, for example, clearly defining the research problem, the purpose and research questions, and describing in detail the methodology used.

Moreover, avoid internet sources where it is unnecessary, and instead, use scientific literature (of which there is very little in the text). The article also needs to indicate the research gap it fills.

I recommend that the author first read the scientific articles from the Web of Science and Scopus databases on the topic presented and, on this basis, develop his research and writing skills. I hope the article's next version will meet the above requirements.
