

Review of: "Bisphosphonate-Related Osteonecrosis of the Jaws Treated with Platelet-Rich Plasma: Preliminary Results from a Case Series"

Prof Ashish Pandey

Potential competing interests: No potential competing interests to declare.

The case series aimed to assess the effectiveness of B.P.F.C. Bio-Plasma® Rich in Pure Growth Factors® for treating Bisphosphonate-related osteonecrosis of the jaws (BRONJ). Preliminary findings suggest that this preparation can potentially restore mucosal integrity in BRONJ patients. However, the study highlights the need for further research with a larger sample size and longer follow-up to validate these promising results and establish its clinical efficacy conclusively.
