

Review of: "Effective use of Waste Materials: A Case Study of Utilization of Fly Ash in Flexible Pavement Structures"

Baskaran Sivaprakash

Potential competing interests: No potential competing interests to declare.

The work is quite impressive but needs still more elaboration. The graphical abstract needs more technical content with a neat flow that clearly portrays the summary of the paper.

Very importantly, the article is actually a review and not a case study. Edit the title of the manuscript accordingly.

Quantitative findings of the work should have been presented in a table with materials and their effectiveness along with references.

Many abbreviations are used. Give a list of abbreviations along with the expansion.

A figure to explain the process that makes the fly ash from waste materials more suitable for civil engineering applications will have more attraction and understanding.

More detailed interpretation and consolidation of reported works is needed to strengthen the paper quality.

A technical paper writing needs still a better level of language, and authors should follow it.
