Potential competing interests: No potential competing interests to declare.

Dear authors,

First, I congratulate the collective for their initiative and their effort in sharing this experience.

Below are my contributions; I hope they help.

Fast-growing tubers such as cassava (*Manihot esculenta*), sweet potato (*Ipomoea batatas*), and pork yam (*Colocasia esculenta*) - Were they planted in the nests? It's confusing. The entire paragraph is confusing; it seems like the information was placed without a connection between the sentences.

In the paragraph "Study area," two distinct moments characterize the environment. In my opinion, this paragraph should be after the first paragraph of the methodology.

The paragraph just below Figure 2, "syntropy," in my opinion, is part of the methodology and not the results.

The paragraph that begins with "and the pandemic came," just below Table 2, is out of context. I suggest removing it.

I could write a paragraph before Table 3 (animals), calling attention to the table.
