Potential competing interests: No potential competing interests to declare.

1. "Furthermore, data acquired from teachers indicated that over the past month, 20 adolescent students consistently exhibited tardiness in waking up early." No references for evidence
2. "determined using the Lemeshow formula" What is this? Is it really true that it was extracted again based on this?
3. According to the research results, 33% consumed less than 1 hour. Can this be considered an addiction?
4. In table 3, a cross-analysis was conducted, and it is necessary to explain how the analysis was expressed as a correlation.
5. The discussion is full of content unrelated to the research results. Discussion should be based only on research results.
6. Research Implications are organized as content unrelated to the research results and discussion.
