# Autologous Immunoglobulin Idiotypic-KLH Conjugate Vaccine

National Cancer Institute

## Source

National Cancer Institute. *Autologous Immunoglobulin Idiotypic-KLH Conjugate Vaccine*.  
NCI Thesaurus. Code C38715.

A cancer vaccine composed of tumor-specific idiotype determinants derived from an individual's tumor cells which are conjugated to keyhole limpet hemocyanin, an immunostimulant carrier protein. When injected into the individual from whom the tumor cells were isolated, this vaccine may stimulate an antitumoral cytotoxic T-lymphocytic immune response. (NCI04)
