

Review of: "Design and Molecular Screening of Various Compounds by Molecular Docking as BACE-1 Inhibitors"

Navid Abedpoor¹

¹ Islamic Azad University, Khorasgan

Potential competing interests: No potential competing interests to declare.

Based on the title, the reader thought it was the original paper based on chemoinformatics, but the structure of the paper is a review article. It is better to improve the title.

The aims of the paper are amorphous.

What are home massages?

The limitations and future studies need to be written.

Need references for the cheminformatics tool.

The author claims that "Based on the above literature study and etiology of the disease, BACE-1 enzyme is selected as an important therapeutic target for AD in the development of inhibitor drugs for reduction of A β . Small molecules that may be inhibitors are designed to be complementary to the target binding site. " Need references.
