Potential competing interests: No potential competing interests to declare.

1. The scientific importance of the plants chosen for study need to be highlighted with technical proof
2. The current need for the study need to be emphasized in detail
3. Discussion is not sufficient
4. Methodology need to be cited properly with suitable reference
5. The need for each study should be elaborate
6. Figure caption should explain the results in short
7. Plant name should be cited uniformly through out the paper
8. Each result should be discussed citing recent literatures
