

# Review of: "Impact of risk factor diabetes mellitus on patients with periodontitis"

Ashwin P S

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

Although it is a good attempt to provide a comprehensive review, certain important clinical practiced based information would have added more value. For instance - outcomes of various types of periodontal treatment modalities, indications of particular treatment modality based on glycemic status of patient, success rates of various treatment modalities, need of antibiotic regimen, influence of laser therapy, use of any newer host modulation agents could be added in the review.
