Juvenile polyposis of infancy

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Juvenile polyposis of infancy. ORPHA:79076*

Juvenile polyposis of infancy (JPI) is the most severe form of juvenile gastrointestinal polyposis (see this term) and is characterized by pancolonic hamartomatous polyposis from stomach to rectum, diagnosed in the first two years of life.
