

Review of: "NER Sequence Embedding of Unified Medical Corpora to Incorporate Semantic Intelligence in Big Data Healthcare Diagnostics"

Zhang Wei

Potential competing interests: No potential competing interests to declare.

This paper combines natural language processing with medical diagnosis, which is of great significance. However, I think the following issues need to be addressed before publication:

1. It is recommended to supplement complete experimental analysis, including discussion of methods, techniques and data usage.
2. Please mention the quantity of better image quality without distortion due to magnification. At the same time, improve the interpretation of these charts.
3. Further confirm the information completeness and timeliness of the references.
