Potential competing interests: No potential competing interests to declare.

First of all, I would like to thank the author for his efforts. The shortcomings I saw in the study are listed below.

- Which gap in the literature does the study fill? This should be presented a little more clearly.
- The findings are presented very superficially and should be deepened.
- The method section is presented in a simple way, but it should be deepened, for example, detailed information about the characteristics of the participants, the data collection tool, and the data collection process should be presented in more detail.
- The recommendations are presented very generally. Recommendations based on study results should be presented more specifically.

As a result, the study can be published if the mentioned deficiencies are completed.
