Decision: Minor revision

## Abstract

# 'following the removal of I was not distressed at all during labour". Kindly state the reason for increase in Cronbach's alpha

## Introduction

# 'The process is the sum .... Health related quality of life'. Kindly reference

# 'The satisfaction score recorded.... Published finding in the study area. This is not clear. Are the Authors saying that there is paucity of information? Please explain

## Materials and Methods

### Study Area/Setting

# 'In Abakaliki, women of the reproductive age group constitute 20% of the people....'. How did the Authors arrive at this figure?

### Sample Size

# They will be interviewed using a semi-questionnaire and BSS-R questionnaire. This statement is in presence tense. Why? Again, introducing semi-questionnaire here makes it more confusing. Please explain

# Some of the data obtained were their socio-demographic characteristics. Kindly remove the word 'their' from the statement

### Exclusion Criteria

# 'Those who were learned .... which was in Igbo'. This statement has contradicted the point stated in inclusion criteria. Kindly revisit

## Results

# 'Client response for each item .... Ekwenyeghi m ma ncha'. Table 2 was omitted. Kindly check

# There is no explanatory note in Table 3. Revisit
