Potential competing interests: No potential competing interests to declare.

Thanks to Dear Authors for their good works, I just wrote some comments for this manuscript:

1- In the Title: It is better also to add the scientific name of yerba mate.

2- In the Abstract: please add the year/years of the survey in the methods.

3- On page 3; Study design: It is better to refer to the supplementary file of designed questions (Appendix A).

4- In Results: for figures, I suggest writing the figure title with more details because, for example, for fig.1, there is no information in the title that this figure belongs to what plant with what aim, etc. You can have a more comprehensive title for figures, for example:

Figure 1. The age distribution of participants consuming yerba mate in Syria

Figure 2. The gender distribution of participants consuming yerba mate in Syria
