

Review of: "Stock Estimation Trial From Spatio-temporal Limited Data of Six Commercial Species in the Middle Madeira River, Southwest Amazon"

Laith F. Lazem

Potential competing interests: No potential competing interests to declare.

1. In the keywords, it is advisable to utilize terms that are not present in the title.
2. The introduction of the study needs more clarity in stating its objective.
3. A map of the study area is recommended.
4. It is preferred that the reference used to classify fish be added.
5. The program that was utilized for statistical analysis and estimation of fish stocks has yet to be specified or mentioned.
6. The caption for Figure 2 is missing and needs to be added.
7. Although a recent study was conducted in the region, more time is needed to obtain accurate results.
8. If the authors had used the lengths and weights of the fish, they could have made up for the short period.
