

Review of: "[General Review] Digital Transformation of Government Public Library Services in Bangladesh"

SBS BenS

Potential competing interests: No potential competing interests to declare.

The aim of this contribution is to investigate the impact of digitization initiatives have affected public libraries in Bangladesh and to identify the opportunities and threats associated with these initiatives.

The final aim is not well emphasized. It would be important to clarify the objective, the methodology, and the implications: practical, theoretical and to emphasize the limits of the study compared to similar studies on the subject (not on Bangladesh) but in other countries.

The introduction should clearly emphasize the gap that is identified to overcome, the methodology, the structure of the paper. Here the structure is not well identified. And the introduction is poor.

There's not sections, no justifications and explanation of results (authors reviewed literature, okay, what is the main conclusion?

Proposed reference on the subject in terms of structure:<https://doi.org/10.1080/00208825.2022.2072067>
