Potential competing interests: No potential competing interests to declare.

Report, reviewer comment:

1. Can Definition 2 and 3 be written as more details or remarks?
2. Correct this line: **Example 5 [2]** Let" in one line.
3. **"Definition 10 [19-23, 3]**Let"? All these references for this definition, I think just one is enough.
4. In "Definition 3.1 and 3.2,  $a_1, a_2, a_3 \geq 0$ ," correct this to " $a_1, a_2, a_3 \in (0, 1)$ ".
5.  $a_2 d(Tx_n, x_n) d(Tx^*, x^*) / d(x_n, x^*)$ . As n tends to infinite, we get 0/0????
6. "4. Application": This section provides examples and applications of the theorem, for example, "nonlinear differential equations," and so on.
7. Try again to the sort of theorems and results such as "Interesting for researchers."

Recommendation: I recommend accepting and publishing the paper after taking all the previous comments and observations and making some minor modifications mentioned above.
