Review of: "Improved Cosine Similarity Measures for q-Rung Orthopair Fuzzy Sets"

Garima Bisht

The article is in need of substantial improvements to enhance its depth and quality. The practical applicability of the work in our daily lives remains unexplored, a significant factor that connects scholarly findings to real-world scenarios, making it more relatable and impactful. Moreover, the article lacks a comparative analysis with other similar works, which is fundamental in providing a broader perspective, highlighting strengths, weaknesses, and unique contributions in the field.
