Potential competing interests: No potential competing interests to declare.

The topic is interesting, however, the details does not really reflect the topic. The questionnaire should not be part of the main work. Please add it as a supplementary file.

Let the discussion focus more on the novelty your work is bringing out rather than just talking about what others have done. What was the rational for choosing 50, 000 as a sample size. Please explain that in the method section otherwise your work seems to vague. Be guided by your topic and let the literature under introduction, Results and discussion all be in line with the topic and your aims.

Good luck
