# Review of: "PSO and the Traveling Salesman Problem: An Intelligent Optimization Approach"

Ioannis Tsoulos<sup>1</sup>

1. University of Ioannina, Greece

1. Practical applications of PSO should be mentioned.
2. The authors should mention why they chose PSO instead of other optimization methods.
3. Step 8 of the pseudocode produces double precision numbers instead of integer values. How do the authors handle these numbers?
4. The termination method used in the pseudocode is rather inefficient. The authors should use more advanced stopping methods.
