The Topic is very relevant. We have seen in the pandemic, how the digital health records can help to trace, and monitor health of people. The paper is well-written, with a lot of examples. an addition of a conceptual diagram depicting the main concept of the paper can be more helpful, it could be a overview . The concept of a digital identity is crucial but the challenges mentioned can be more precise ,clustered to the domain being referred. What is discussed in Standards is also very true, but is generic. Can some specifics about standards be discussed?
