# Recombinant Interferon Alfa-1b

National Cancer Institute

## Source

National Cancer Institute. *Recombinant Interferon Alfa-1b*. NCI Thesaurus. Code C53411.

The non-glycosylated recombinant interferon alpha, subtype 1b, with immunostimulatory and antineoplastic activities. Alpha interferon-1b binds to specific cell-surface receptors, resulting in the transcription and translation of genes whose protein products mediate antiviral, antiproliferative, anticancer, and immune-modulating effects.
