Review of: "Integrating Quantum Computing with AI: A Perspective on Time-Series Forecasting"

Mónica Vieira Martins¹

1. Instituto Politécnico de Portalegre, Portugal

The subject of the article is interesting and relevant, as it proposes to discuss the interdependencies between quantum computing and machine learning with applications in time series. However, both areas are presented quite superficially, which makes the authors' contribution to the advancement of knowledge in these fields very limited.

Although the bibliography includes some relevant recent works, I was unable to find reference 5 – Jaffe, A. 'The illusion of time.' *Nature*. 556.7701 (2018): 304–306 – in bibliographic databases. It is suggested that this reference be verified.
