Bilateral multicystic dysplastic kidney

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Bilateral multicystic dysplastic kidney. ORPHA:97364

Bilateral multicystic dysplastic kidney (MCDK) is a lethal form of multicystic dysplastic kidney (MCDK, see this term), a congenital anomaly of the kidney and urinary tract (CAKUT), in which both kidneys are large, distended by non-communicating multiple cysts and non-functional.
